PROFESSIONAL SUMMARY

AI & Data Science graduate with six months of hands-on experience building and validating data pipelines as part of an active product team at Anodium. Comfortable across the full data lifecycle ingesting and cleaning structured and semi-structured data, writing ETL scripts in Python, querying and validating output in SQL, and tracking down failures before they become someone else's problem. Currently building on that foundation with focused self-study in Databricks, PySpark, and Delta Lake. Looking to bring a detail-oriented, reliability-first approach to a Data Engineer role at Amgen, developing scalable pipelines for analytics and ML use cases alongside senior engineers.

TECHNICAL SKILLS

Programming & Data: Python (NumPy, Pandas, Matplotlib), SQL, Git/GitHub, FastAPI

Data Engineering: ETL/ELT pipeline design, data pipeline construction & orchestration, data cleansing/validation & quality checks, structured & semi-structured data (CSV, JSON, XML, Parquet), REST API integration, Streamlit

Distributed & Cloud (self-study): PySpark, Databricks notebooks & jobs, Delta Lake & lakehouse concepts, AWS/Azure/GCP fundamentals

AI/LLM Tooling: LangGraph, LangChain concepts, Groq API, OpenAI-compatible interfaces, Hugging Face models, embeddings, RAG concepts, prompt engineering

Practices: Testing and validating data/AI outputs, debugging, documentation, iterative feedback cycles, Agile/Scrum (sprint planning, standups)

Operating System: Linux basic, Windows

WORK HISTORY

AI Project Contributor (Intern) — Anodium *2026 (6 months)*

- Built and tested data pipelines and features for an active AI product — handled ingestion, transformation, cleansing, and validation of structured and semi-structured data before it shipped.
- Learned where AI tools genuinely speed things up (writing code, catching bugs) versus where they still need human judgment (planning and structuring data), and applied that to keep the team's data reliable.
- Worked closely with the data and product team on requirement gathering and iterative feedback in a fast-paced, async environment — communicating clearly and owning delivery without needing much hand-holding.
- Participated in Agile/Scrum ceremonies — sprint planning, stand-ups, and iterative delivery cycles — as part of the product team's regular workflow.

Operations Associate — Zepto *2025*

- Managed high-volume, customer-facing operations, owning accuracy and issue resolution under time pressure.
- Built strong async communication habits and a sense of accountability that carried directly into how I work on technical teams today.

PROJECTS

Neural Schema Agent — Autonomous AI Memory & Reasoning Framework

- Building a modular autonomous AI agent with Python, FastAPI, Groq LLM, and ChromaDB that integrates hierarchical memory (working, episodic, semantic, procedural) with planning, reasoning, and tool execution for context-aware decision making.
- Designed a scalable, memory-first architecture with vector embeddings, semantic retrieval, and reflection loops — the same "define good, catch regressions" discipline that reliable data pipelines need.

Real-Time Anime Dubbing — Multi-Stage Automation Pipeline

- Chained together a multi-stage ETL-style pipeline — Whisper (speech-to-text), MarianMT (translation), gTTS (speech synthesis), and FFmpeg (media processing) — deployed through Streamlit.
- Handled retries, stage failures, and large media inputs, which meant designing for reliability and monitoring, not just a happy-path demo — the same instincts needed to keep scheduled data jobs healthy.

AI-Based Interview Analysis System — Model Evaluation & Testing

- Built an end-to-end system that processes candidate responses through an ML/Python pipeline and generates structured performance reports.
- Added input monitoring and output validation to define what "good" looks like, catch regressions early, and flag what the model gets wrong — the same quality-check mindset behind reliable ETL/ELT workflows.

CERTIFICATIONS & CONTINUOUS LEARNING

- Certifications: SQL, Data Science, Python Programming, NLP
- Anthropic Academy: Introduction to Model Context Protocol; AI Fluency: Framework & Foundations
- Self-study in progress: Databricks & PySpark fundamentals, Delta Lake/lakehouse architecture, ML evaluation & testing practices, MLOps fundamentals, RAG, agent frameworks, LLM observability

EDUCATION

Bachelor of Engineering — Artificial Intelligence & Data Science | BNCOE, Pusad | 2025
Diploma — Mechanical Engineering | Acharya Shrimannarayan Polytechnic | 2019–2022
